Marked Up Version Showing Changes

- 1. (Amended) An apparatus for forming an artificial valve to treat gastroesophageal reflux disease comprising:
 - a first endoscope to be inserted from the mouth into a body cavity;
- a holding device extending out of the distal end of the first endoscope and holding a point of a digestive wall of the cavity body where the artificial valve is formed;
- a first needle [disposed the oral side of the point,] being moveable [retractable] in a longitudinal direction of [along] the first endoscope and including a sharp end for penetrating the digestive wall from the oral side of the point to the anal side of the point;
 - a suture passing through the digestive wall following the first needle;
- and a suture retaining device having a grasping section for grasping the suture after it has passed through the digestive wall.
- 2. (Amended) The apparatus according to claim 1, further comprising:
- a knot pushing device for <u>moving</u> [pushing] a knot <u>of the suture</u>, <u>which is formed outside</u>
 the body cavity after the suture has pulled out from the body cavity by the suture retaining device,
 into the body cavity [retained and formed outside of a body by the suture retaining device].
- 3. (Amended) The apparatus according to claim 1, wherein the holding device includes two jaws moveable between an opened position and a closed position.
- 7. (Amended) The apparatus according to claim [1] 6, wherein the first needle and second needle are disposed [in] on the outer periphery of the first endoscope.

8. (Amended) The apparatus according to claim 1, <u>further including a guide member having a</u> through hole is provided side by side with the holding device;

wherein the suture retaining device is moveable in the through hole of the guide member [includes a guide member extendable with the holding device].

- 9. (Amended) The apparatus according to claim 1, wherein the suture retaining device includes two jaws <u>moveable between</u> [, the two jaws having] an <u>opened</u> [opening] position and a <u>closed</u> [closing] position.
- 10. (Amended) The apparatus according to claim 1, further comprising a second endoscope, the <u>first</u> needle <u>extended from a [extending out of the]</u> distal end of the second endoscope.
- 11. (Amended) The apparatus according to claim 1, wherein the first needle is <u>moveable</u> [retractable from the first endoscope on] <u>in a position nearer to the handle section of the endoscope than</u> [the proximal section of] the <u>distal end of the endoscope</u> [holding device] <u>is</u>.
- 12. (Amended) The apparatus according to claim 1, wherein when the holding device holds the junction of <u>a</u> [the] stomach and <u>a</u> [the] esophagus, and the first needle is positioned <u>in</u> [slightly near] the oral side of the junction.
- 20. (New) The apparatus according to claim 6, further comprising a second endoscope, wherein the first needle and the second needle extend out of a distal end of the second endoscope.
